

RESEARCH FORECAST REPORT

LPWA NETWORKS FOR IoT: WORLDWIDE TRENDS AND FORECASTS 2015–2025

MICHELE MACKENZIE

analysismason.com

About this report

Low-power, wide-area (LPWA) is a term used to describe a type of network designed to support the IoT. LPWA networks provide a low-cost, low-power alternative to cellular.

This report presents our detailed 10-year worldwide forecast for LPWA network device connections, LPWA connectivity-related average revenue per connection (ARPC), and LPWA connectivity-related revenue.

We focus on the LPWA connectivity market in this report. Our cellular M2M connectivity forecast is available on Analysys Mason’s website.¹

We provide a forecast for eight regions and 74 countries in the accompanying data annex. We forecast six industry sectors and provide detailed forecasts on 22 applications within those sectors. We have also included an ‘Other’ sector to capture new use cases.

WHO SHOULD READ THIS REPORT

- Senior executives of M2M business units
- Senior executives responsible for R&D and network innovation.
- Market analysts responsible for M2M market sizing.

GEOGRAPHICAL COVERAGE

- Central and Eastern Europe (CEE)
- Developed Asia–Pacific (DVAP)
- Emerging Asia–Pacific (EMAP)
- Latin America (LATAM)
- Middle East and North Africa (MENA)
- North America (NA)
- Sub-Saharan Africa (SSA)
- Western Europe (WE)

KEY METRICS

- Low-power wide-area (LPWA) network device connections
- LPWA connectivity-related average revenue per connection (ARPC)
- LPWA connectivity-related revenue
- Six industry sectors and 22 LPWA applications (not including ‘Other’) within those sectors
 - Agriculture
 - Industrial
 - Logistics and tracking
 - Smart buildings
 - Smart cities
 - Utilities

Contents

6. Worldwide trends

7. Worldwide: LPWA networks could grow to 3.5 billion connections in 2025, with several sectors contributing to growth
8. Worldwide: LPWA networks could underpin a wide variety of applications within different sectors
9. Worldwide: Applications with existing or emerging use cases will account for 70% of a total of 3.5 billion connections by 2025
10. Worldwide: Applications are split into three categories based on use cases
11. Worldwide: Demand is already strong for six application groups, which will grow to 1.2 billion connections or 36% of the total
12. Worldwide: LPWA connections will overtake those of cellular M2M by 2019 and will be almost triple the number of M2M connections by 2025
13. Worldwide: Connectivity revenue will reach an insignificant USD5 billion in 2025 – network operators need to build volume and create value
14. Worldwide: ARPC is insignificant – LPWA is a volume business
15. Worldwide: Emerging Asia–Pacific will be the largest market in 2025

16. Western Europe

17. Western Europe: LPWA connections will grow at 60% CAGR to reach 684 million in 2025, dominated by the utilities sector

18. Central and Eastern Europe

19. Central and Eastern Europe: LPWA connections will reach 288 million in 2025, driven by growth in smart grid and smart buildings

20. Middle East and North Africa

21. Middle East and North Africa: Operators in the region are deploying technologies that use unlicensed spectrum

22. Sub-Saharan Africa

23. Sub-Saharan Africa: LPWA penetration of the addressable market will remain low, as investment is hard to justify

24. Emerging Asia–Pacific

25. Emerging Asia–Pacific: LPWA connections will increase to 860 million by 2025, making EMAP the largest LPWA market

26. Developed Asia–Pacific

27. Developed Asia–Pacific: LPWA connections will grow to 346 million, driven by the utilities sector

28. North America

29. North America: Proprietary LPWA solutions have so far led the market, which is currently the largest

30. Latin America

31. Latin America: LPWA connections will grow to 238 million in 2025, driven by tracking and agriculture applications

32. Forecast methodology and assumptions

33. Research methodology and comparison with previous LPWA networks forecast

Worldwide: LPWA networks could grow to 3.5 billion connections in 2025, with several sectors contributing to growth

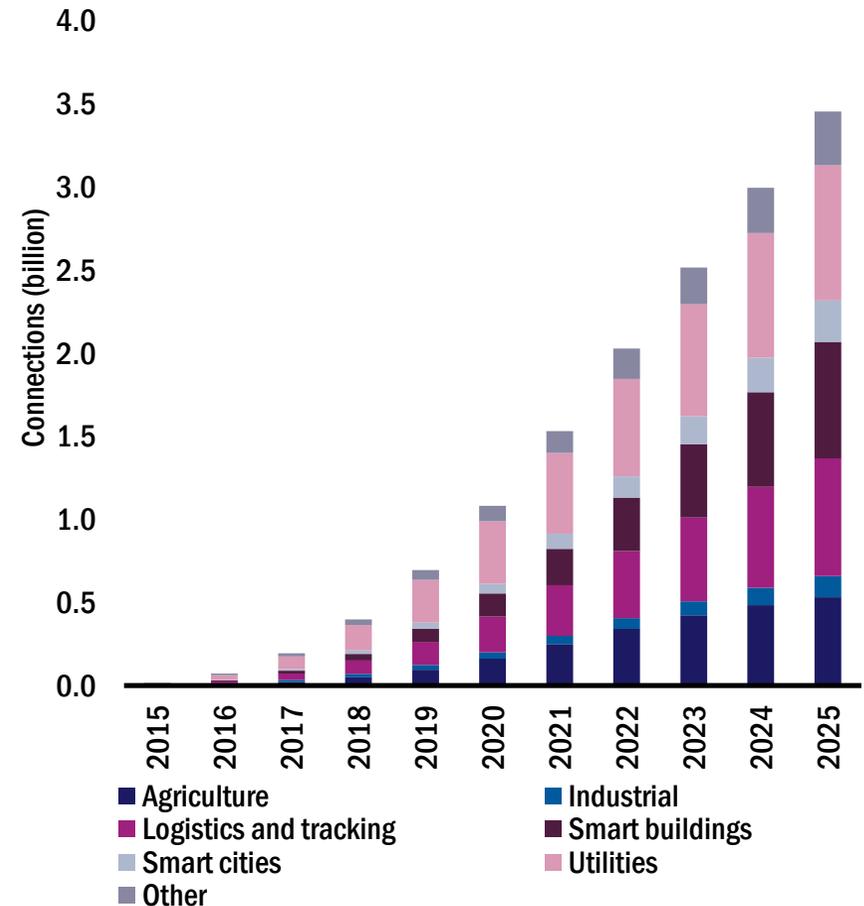

LPWA networks have the potential to grow to 3.5 billion connections, but no single sector is driving overall growth. This is in contrast to M2M networks, where automotive and transport applications dominate.

The early years of LPWA networks have seen significant activity in several sectors.

- **Utilities and smart grid.** Proprietary technologies, such as Ingenu’s RPMA and Sensus’ FlexNet networks, are already supporting millions of endpoints for smart grid and smart metering applications. We expect this category to grow further.
- **Smart buildings.** There is strong potential for LPWA networks in smart building applications, especially where regulation plays a prominent role in safety. Equipment to detect and monitor smoke and fire is increasingly regulated.
- **Logistics and tracking.** LPWA networks will be deployed to support tracking of high-value enterprise and consumer assets. This market is at an earlier stage for most applications.

We have assessed demand for the 22 applications covered in this report, as the market is relatively immature. This is discussed in more detail later in this section.

Figure 1: Potential LPWA connections, 2015–2025

Worldwide: LPWA connections will overtake those of cellular M2M by 2019 and will be almost triple the number of M2M connections by 2025

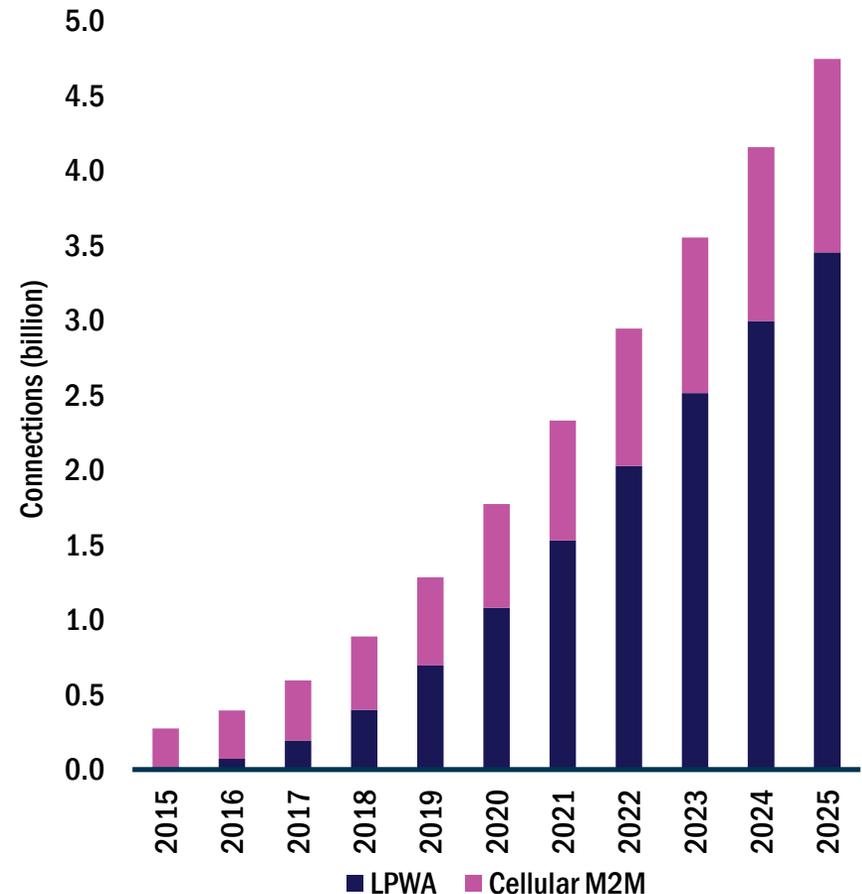

We expect LPWA networks to support more connections than cellular M2M networks in 4 years, despite the nascent state of the technology. This is largely due to latent demand for a low-cost, wide-area solution, which also meets the requirements of low-power, low-bandwidth devices.

Cellular M2M networks have played a strong role in supporting M2M applications. However, these are only appropriate for applications that require mobility or high bandwidth, and where investment in a more expensive solution is supported by the business case. Until recently, there was a gap in the market for a lower cost communications solution, which technologies such as LoRa and SIGFOX are now beginning to fill.

Cellular M2M networks will grow to 1.3 billion connections in 2025, giving a CAGR of 18%. In contrast, LPWA networks will grow from a small base of 18.5 million connections in 2015 to 3.5 billion in 2025 – a CAGR of 69%.

Cellular M2M networks are dominated by a single sector (automotive and transport), which will comprise around 65% of global connections in 2025. Conversely, no single sector will dominate the LPWA market, with sectors as diverse as utilities, smart grid and tracking all driving adoption of LPWA connections.

FORECAST METHODOLOGY AND ASSUMPTIONS

ABOUT THE AUTHOR AND ANALYSYS MASON

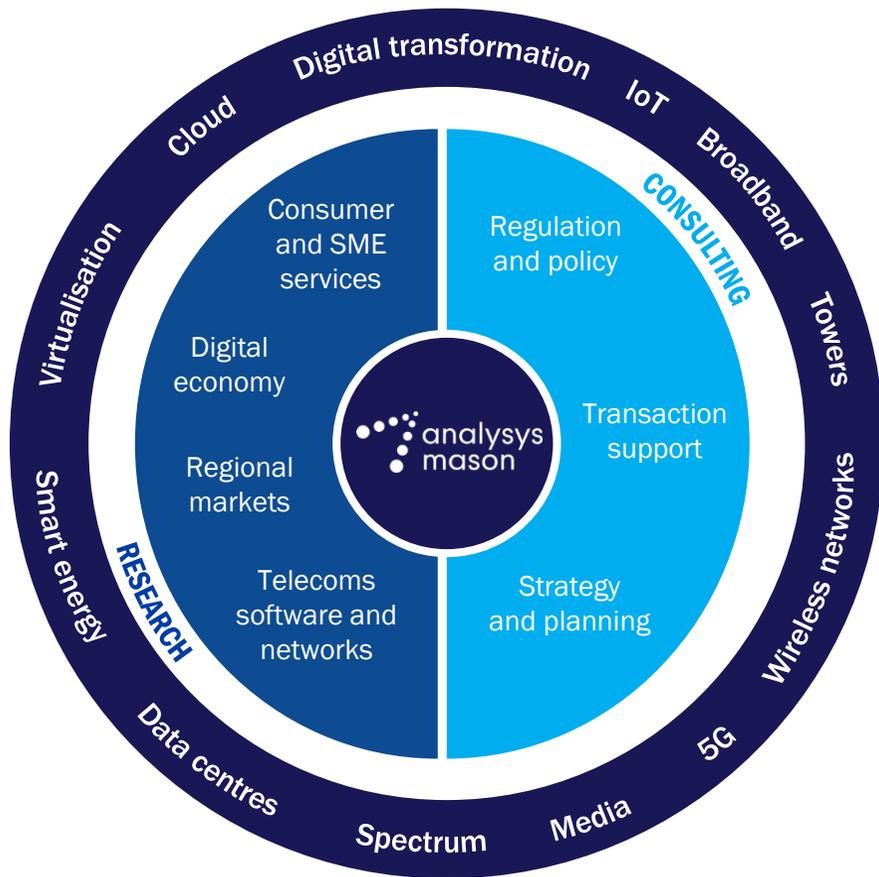

About the author

Michele Mackenzie (Principal Analyst) is an analyst for Analysys Mason's *IoT and M2M Solutions* research programme, with responsibility for M2M and LPWA forecasts. She has 17 years of experience as an analyst. She produces reports and forecasts on M2M and IoT in industry sectors, such as transport, healthcare and smart cities, and analyses the impact of IoT network technologies, such as LPWA networks. Prior to joining Analysys Mason in February 2014, Michele was a freelance analyst with a focus on M2M and IoT technology and trends. She has written reports for Machina Research and produced research for other clients in areas such as mobile broadband and digital media.

Analysys Mason’s consulting and research are uniquely positioned

Analysys Mason’s consulting services and research portfolio

CONSULTING

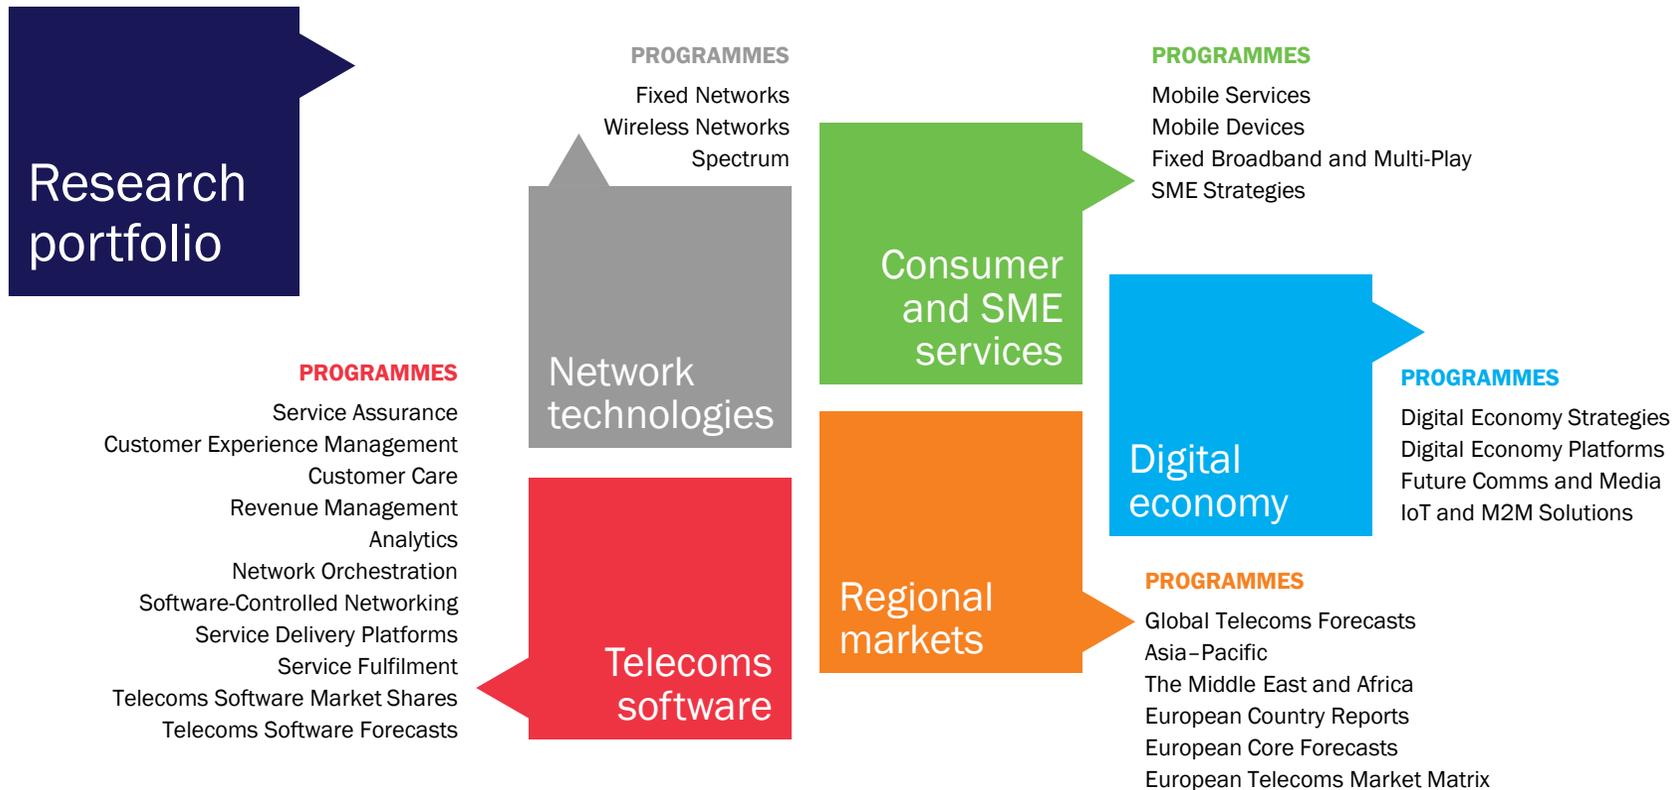

- We deliver tangible benefits to clients across the telecoms industry:
 - communications and digital service providers, vendors, financial and strategic investors, private equity and infrastructure funds, governments, regulators, broadcasters, and service and content providers.
- Our sector specialists understand the distinct local challenges facing clients, in addition to the wider effects of global forces.
- We are future-focused and help clients understand the challenges and opportunities that new technology brings.

RESEARCH

- Our dedicated team of analysts track and forecast the different services accessed by consumers and enterprises.
- We offer detailed insight into the software, infrastructure and technology delivering those services.
- Clients benefit from regular and timely intelligence, and direct access to analysts.

Research from Analysys Mason

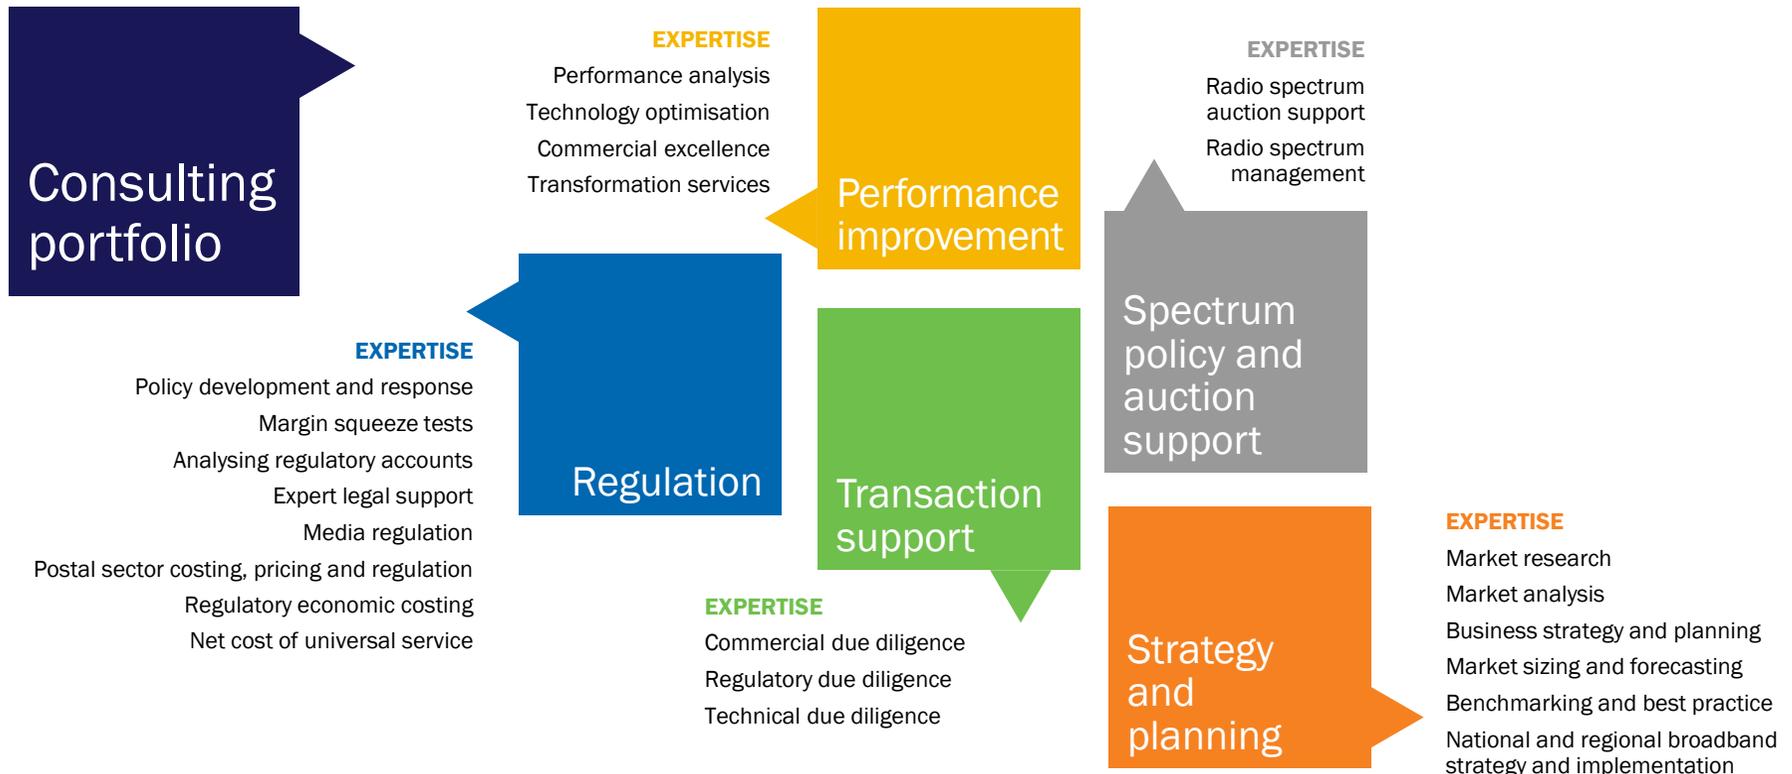

We provide dedicated coverage of developments in the telecoms, media and technology (TMT) sectors, through a range of research programmes that focus on different services and regions of the world.

To find out more, please visit www.analysismason.com/research

Consulting from Analysys Mason

For 30 years, our consultants have been bringing the benefits of applied intelligence to enable clients around the world to make the most of their opportunities.
